Saf-T-Block Featherweight Adjustable Safety Press Block

5 TON MAXIMUM CAPACITY

This Featherweight series is designed to provide maximum protection for most press brakes and smaller presses where working space is at a premium during set up and maintenance.

These Featherweight blocks provide convenient use and handling for your employees. The wide span of adjusting screw and nut assemblies have precision-cut Acme threads for extra strength and ease of use with a maximum static load of 5 tons. The 6061-t6511 high-strength aluminum body is machined to give you ultimate stiffness with maximum adjustability at a minimum weight. In fact, these blocks only weigh TWO pounds for the 12 inch model. The adjusting screw is easily moved by hand.

When you make it easy for your employees, they will use it! Safety practices quickly become a habit with the Saf-T-Block Featherweight Press Blocks.
